

EPISODE 06 • STUDY NOTES

Records in Salesforce

Create, Edit & Delete

A complete, easy-to-revise breakdown of the video — with tables, diagrams, and a step-by-step build guide.

1

Introduction

0:00 – 0:30

In the previous episode, we learned about Fields and different Field Data Types. Now that we have an Object with Fields set up, it's time to start storing **actual data** — and that means learning about **Records**.

By the end of this lesson, you will know:

- What a Record is
- How to create a Record
- How to edit a Record
- How to delete a Record
- How to restore deleted records using the Recycle Bin

2

What is a Record?

0:30 – 2:00

Continuing with the Student Object example, our object has fields like Student Name, Roll Number, Email, and Phone Number. When we enter information for one student and save it, that complete row of information is called a **Record**.

Example Record

Field	Value
Student Name	Rahul Sharma
Roll Number	101
Email	rahul@gmail.com
Phone	9876543210

This complete set of information — all four values together — represents **one Record**.

SIMPLE ANALOGY

Object = Table | Fields = Columns
Record = One Row of Data

3 The Three Core Actions

2:00 – 6:30

With a record in place, there are three fundamental actions every Salesforce user needs to know: **Create**, **Edit**, and **Delete**.

① Create

Open the Object, click **New**, enter details, and click **Save**.

② Edit

Open the record, click **Edit**, update a value, and **Save**.

③ Delete

Open the record, click **Delete**, and confirm.

Step-by-Step: Creating a Record

- 1 Open the **Student** Object.
- 2 Click **New**.
- 3 Enter the student details (Name, Roll Number, Email, Phone).
- 4 Click **Save** — your first record is created!

Step-by-Step: Editing a Record

- 1 Open the record you want to update.
- 2 Click **Edit**.
- 3 Update the value — e.g. change the Phone Number.
- 4 Click **Save** to apply the changes.

Step-by-Step: Deleting a Record

- 1 Open the record you want to remove.
- 2 Click the **Delete** button.
- 3 Confirm the deletion — the record disappears from the object.

*Don't worry — deleting a record doesn't erase it permanently. Salesforce moves it to the **Recycle Bin** first.*

4 Restoring a Deleted Record

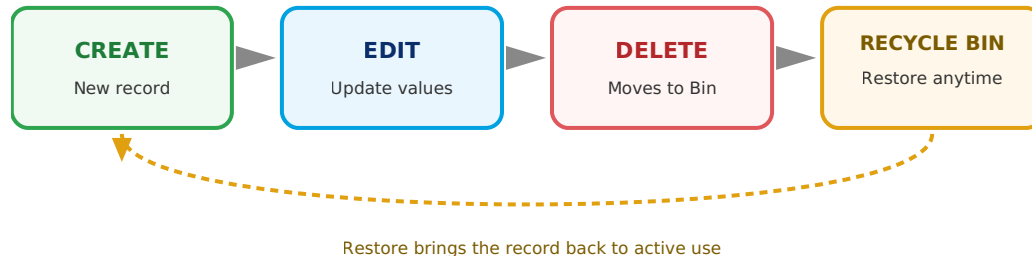

via Recycle Bin

Every deleted record is safely held in Salesforce's **Recycle Bin** until it's restored or permanently purged. Here's how to bring a record back:

- 1 Go to the **Recycle Bin**.
- 2 Locate the deleted record in the list.
- 3 Click **Restore**.
- 4 The record is now available again, exactly as it was.

Safety net: The Recycle Bin protects against accidental deletions, giving admins and users a way to recover data without needing a backup restore.

5 Record Lifecycle — Recap Diagram

6 Episode Summary

6:30 – 7:00

- ✓ What a Record is — **one row of data** inside an Object
- ✓ How to create a Record (New → fill details → Save)
- ✓ How to edit a Record (Edit → update → Save)
- ✓ How to delete a Record (Delete → confirm)
- ✓ How to restore deleted records using the **Recycle Bin**

Coming up next: We'll learn about **Tabs** in Salesforce and understand how they help users easily access objects and records.
