

Tabs in Salesforce

Standard Tabs vs Custom Tabs

A complete, easy-to-revise breakdown of the video — with tables, diagrams, and a step-by-step build guide.

1 Introduction

0:00 – 0:30

In the previous episode, we learned how to create, edit, and delete records. But that raises a natural question: **how do users easily access these objects and their records** in Salesforce? The answer is **Tabs**.

By the end of this lesson, you will know:

- What a Tab is
- Standard Tabs vs Custom Tabs
- How to create a Custom Tab
- How to add it to an App

2 What is a Tab?

0:30 – 2:00

Think of a web browser — at the top, you see different tabs that let you quickly switch between pages. Salesforce works the same way: a **Tab** provides an easy way to access an Object and its records.

IN SIMPLE WORDS

A Tab is a shortcut that lets users quickly access an Object and its records

Important: Without a Tab, the Object still exists in Salesforce — but users can't easily open it from the navigation bar.

3 Standard Tabs vs. Custom Tabs

2:00 – 3:30

Salesforce provides **two** types of Tabs:

1. Standard Tabs

Already created by Salesforce for Standard Objects. You don't need to create these.

Accounts

Contacts

Leads

Opportunities

Cases

2. Custom Tabs

Needed for Custom Objects (like our **Student** object), since Salesforce doesn't add them to the navigation bar automatically.

Student Tab

Tab Type	Applies To	Do You Need to Create It?
Standard Tab	Standard Objects (Account, Contact, Lead...)	No — already provided
Custom Tab	Custom Objects (Student, Patient, Vehicle...)	Yes — must be created manually

4 Practical Demo: Create a Custom Tab

3:30 – 7:00

Let's create a Custom Tab for our **Student** object so it shows up in the navigation bar.

Part A — Create the Custom Tab

- 1 Go to **Setup**.
- 2 Search for **Tabs**.
- 3 Under **Custom Object Tabs**, click **New**.
- 4 Select the **Student** Object.
- 5 Choose a **Tab Style** (icon and color for the tab).
- 6 Click **Next**, keep the default settings, and click **Save**.

Congratulations! You've successfully created a Custom Tab for the Student object.

Part B — Add the Tab to Your App

- 1 Go to **App Manager**.
- 2 Open your App.

3 Click **Navigation Items**.

4 Move the **Student** Tab to the selected list.

5 Click **Save**.

*Open the App again — the **Student** tab now appears in the navigation bar, and users can access all Student records with one click.*

5 Tab Flow — Recap Diagram

Object exists → Tab makes it accessible → App Nav Bar makes it visible to users

6 Episode Summary 7:00 – 7:30

- ✓ What a Tab is — a **shortcut** to access an Object and its records
- ✓ The difference between **Standard Tabs** and **Custom Tabs**
- ✓ How to create a Custom Tab for the Student object
- ✓ How to add a Tab to an App via Navigation Items

***Coming up next:** We'll learn about **Apps** in Salesforce and understand how different tabs are organized together to create a complete application.*
