

Apps in Salesforce

Create Your First Custom App

A complete, easy-to-revise breakdown of the video — with tables, diagrams, and a step-by-step build guide.

1 Introduction

0:00 – 0:30

In the previous episode, we learned about Tabs and how they help users quickly access objects and records. That raises the next question: **where do these tabs actually appear?** The answer is **Apps**.

By the end of this lesson, you will know:

- What an App is
- Standard Apps vs Custom Apps
- How to create a Custom App
- How to add Tabs to an App

2 What is an App?

0:30 – 2:00

Think of your mobile phone — you have different apps like WhatsApp, YouTube, Gmail, and Instagram, each built around a specific purpose. Salesforce works the same way.

WhatsApp

YouTube

Gmail

Instagram

IN SIMPLE WORDS

**An App is a collection of related Tabs
designed for a specific group of users**

Why this matters: A Sales team doesn't need HR-related tabs, and an HR team doesn't need Sales-related tabs. Salesforce lets us create different Apps for different departments — each showing only the tabs that team actually needs.

3 Standard Apps vs. Custom Apps

2:00 – 3:30

Salesforce provides **two** types of Apps:

1. Standard Apps

Already available in Salesforce, ready to use out of the box.

Sales

Service

Marketing

Analytics

2. Custom Apps

Built by us when a business needs its own dedicated application.

Student Management

Example: Student Management App

If we're building a Student Management System, we can create a **Student Management App** and add relevant tabs inside it:

Tab	Purpose
Students	Student records (our object from earlier episodes)
Courses	Track course offerings
Teachers	Manage teacher/staff records
Attendance	Track daily/periodic attendance

This keeps everything related to student management organized in **one place**.

4 Practical Demo: Create a Custom App

3:30 – 7:30

Let's build the **Student Management** App and add our Student tab to it.

- 1 Go to **Setup**.
- 2 Search for **App Manager**.
- 3 Click **New Lightning App**.
- 4 Enter the App Name: **Student Management**.
- 5 Choose an App Logo if you want (optional).
- 6 Click **Next**.
- 7 Select the navigation items — add the **Student** tab created earlier.
- 8 Complete the remaining steps and click **Save & Finish**.

App Setup Summary

Setting	Value
App Name	Student Management
App Logo	Optional
Navigation Items	Student Tab

Congratulations! Open the **App Launcher** and you'll see your new Student Management App. Opening it shows all the tabs you've added, right in the navigation bar.

5 Tabs Inside an App — Recap Diagram

One App groups multiple related Tabs together, giving each team a focused, uncluttered workspace.

6 Episode Summary

7:30 – 8:00

- ✓ What an App is — a **collection of related Tabs** for a specific group of users
- ✓ The difference between **Standard Apps** and **Custom Apps**
- ✓ How to create a Custom App (Student Management)
- ✓ How to add Tabs to an App via Navigation Items

***Coming up next:** We'll learn about **Page Layouts** and understand how we can control what users see on a record page.*
