

EPISODE 09 • STUDY NOTES

Page Layouts in Salesforce Fields, Related Lists, Buttons & Actions

A complete, easy-to-revise breakdown of the video — with tables, diagrams, and a step-by-step build guide.

1 Introduction 0:00 – 0:30

We've now built Objects, Fields, Records, Tabs, and Apps. The next step is controlling **how users see and interact** with records — and that's exactly what **Page Layouts** do.

By the end of this lesson, you will know:

- What a Page Layout is • Why we need it • How to add/remove Fields
- What Related Lists are • How to manage Buttons and Actions

2 What is a Page Layout? 0:30 – 2:00

Think of an online registration form — you only see the fields that are actually required, like Name, Email, Phone Number, and Address. Salesforce record pages work the same way.

IN SIMPLE WORDS

A Page Layout controls the appearance and functionality of a record page

A Page Layout Decides...

Controls	Meaning
Visible Fields	Which fields appear on the record page
Editable Fields	Which fields users can actually update
Related Lists	Which connected records show up below
Buttons & Quick Actions	What actions users can perform directly

3 Why are Page Layouts Needed?

2:00 – 3:00

Different users often need different information. A Sales team may only need customer and opportunity details, while an HR team needs employee information.

The benefit: Instead of showing every field to everyone, Page Layouts let us display only what's relevant — making the interface cleaner, easier to use, and boosting productivity.

4 Add & Remove Fields

3:00 – 5:00

Let's switch to Salesforce and customize the **Student** Page Layout.

- 1 Open the **Student** Object.
- 2 Go to **Page Layouts**.
- 3 Open the **Student Page Layout**.
- 4 To **add** a field, drag it from the palette onto the layout.
- 5 To **remove** a field, drag it back to the palette.
- 6 Click **Save**.

Result: Open a Student record and the page updates immediately, reflecting exactly the fields you added or removed.

5 Related Lists

5:00 – 6:30

A **Related List** displays records that are connected to the current record. For example, an **Account** record can display its related **Contacts** and **Opportunities** right on the same page.

You can choose which Related Lists appear and arrange their order on the Page Layout — making it easy for users to view connected information without opening multiple pages.

Example: Related Lists on an Account Record

Contacts

Opportunities

Cases

Activities

6 Buttons & Actions

6:30 – 8:00

Buttons and Quick Actions let users perform common tasks directly from the record page.

Buttons

Standard actions on the record page:

New

Edit

Delete

Clone

Quick Actions

Fast shortcuts for common tasks — configurable per business requirement, shown directly on the record page for one-click access.

Admin control: You decide exactly which buttons and actions appear on each Page Layout, based on what each team actually needs to do.

7 Anatomy of a Page Layout — Recap Diagram

8 Episode Summary 8:00 – 8:30

- ✓ What a Page Layout is — controls the **appearance & functionality** of a record page
- ✓ Why Page Layouts matter — a cleaner, role-relevant interface for each team
- ✓ How to add and remove Fields via drag-and-drop
- ✓ What Related Lists are and how they surface connected records
- ✓ How to manage Buttons and Quick Actions

Coming up next: We'll learn about **Record Types** and see how different users can have different Page Layouts for the same object.
