

EPISODE 10 • STUDY NOTES

Record Types in Salesforce Business Use Cases & Assigning Page Layouts

A complete, easy-to-revise breakdown of the video — with tables, diagrams, and a step-by-step build guide.

1 Introduction

0:00 – 0:30

In the previous episode, we learned about Page Layouts and how they control what users see on a record page. But what if **different users need different page layouts for the same object**? That's exactly what **Record Types** solve.

By the end of this lesson, you will know:

- What Record Types are
- Why we need them
- Real business use cases
- How to assign different Page Layouts using Record Types

2 What are Record Types?

0:30 – 2:30

Imagine a college has one **Student** Object, but two categories of students: **Regular Students** and **Distance Learning Students**. Both live in the same object, but each needs different information.

Regular Student Needs	Distance Learning Student Needs
Classroom	Study Center
Section	Online Portal ID
Roll Number	—

Showing all these fields to every student wouldn't make sense. Instead, we create **two Record Types**, each with its own Page Layout.

IN SIMPLE WORDS

Record Types let us create different business processes, page layouts, and picklist values — for the same object

3 Real Business Use Cases

2:30 – 5:00

Example 1 — Education (Student Object)

Regular Student

Distance Learning

Each Record Type gets its own fields and layout, matching what that category of student actually needs.

Example 2 — Car Showroom (Vehicle Object)

New Vehicle

Used Vehicle

A **Used Vehicle** needs extra fields — Previous Owner, Mileage, Registration Number — that a **New Vehicle** simply doesn't need.

Example 3 — Customer Support (Case Object)

Technical Support

Billing Support

Each support department requires different information, so each gets its own Record Type and Page Layout.

4 Practical Demo: Create Record Types

5:00 – 8:00

Let's set up two Record Types for our **Student** object.

Part A — Create the Record Types

- 1 Open the **Student** Object.
- 2 Go to **Record Types**.
- 3 Click **New**.
- 4 Create a Record Type called **Regular Student**.
- 5 Create another Record Type called **Distance Learning Student**.

Part B — Assign Page Layouts

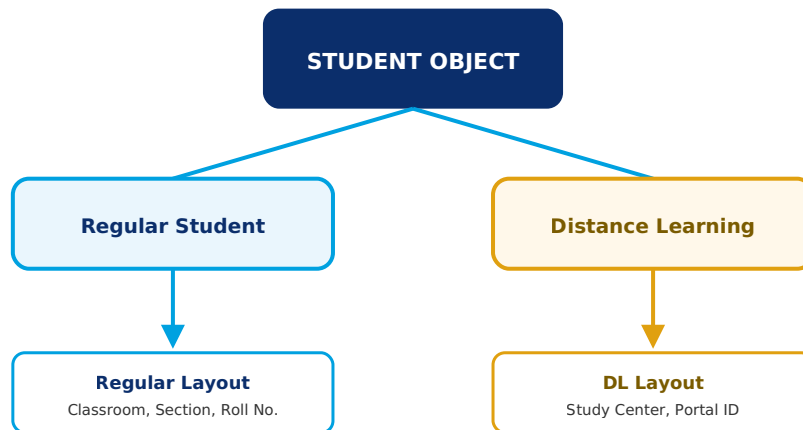

- 1 Go to **Page Layout Assignment**.
- 2 Assign the **Regular Student Layout** to the Regular Student Record Type.

3

Assign the **Distance Learning Layout** to the Distance Learning Record Type.

Result: When users create a new Student record, they first choose a Record Type. Based on their selection, Salesforce automatically displays the correct Page Layout.

5 How Record Types Work — Recap Diagram

6 Episode Summary 8:00 – 8:30

- ✓ What Record Types are — a way to give the **same object** different processes, layouts, and picklist values
- ✓ Why businesses use them — different user groups need different fields
- ✓ Real-world examples: Student, Vehicle, and Case objects
- ✓ How to create Record Types and assign different Page Layouts to each

Coming up next: We'll learn about **Compact Layouts** and see how Salesforce controls the information displayed in the Highlights Panel.
